Pandora Data Processing Center
NIRDA PSF Requirements Test Report
---

Package Versions:
- pandora_requirements: 0.1.2
- pandorapsf: 0.7.0
- pandorasat: 0.12.2
- astropy: 6.0.1

Detector Characteristics:
zodiacal_background_rate: 4.0 electron / (pix s)
stray_light_rate: 2.0 electron / (pix s)
thermal_background_rate: 10.0 electron / (pix s)
dark: 1.0 electron / (pix s)
readnoise: 12.727922061357855 electron / pix

Test Requriements:
- Target Test j band Magnitude: 9.0
- Target Test $T_{eff}$: 3500.0 K
- Required Number of Integrations: 900
- Required SNR: 6000.0
- Required Wavelength: 1.3 micron micron
- Required R: 30.0

Additional Information:
- This document contains test results for a target star on the NIRDA.
- Generated using automated tests and visualizations.
- This test uses CBE for all Pandora parameters
- This test assumes no jitter motion between frames.
